### **Objectives:**

[www.san-sex.ro](http://www.san-sex.ro) is the first educational project in the field of sexual medicine in Romania and was initiated by the Romanian Association for Sexual Medicine (AMSR).

### **Design and method:**

Starting with January '06 we created the site [www.san-sex.ro](http://www.san-sex.ro), the Romanian connection of ESDA. With a friendly interface, accessing the site, you can find the address of a doctor specialized in sexual medicine, access an encyclopedia, or different articles about sexual medicine or ask an expert in this filed by e-mail.

### **Results:**

Analyzing the results, we have to reveal first some data about the accessibility of internet in Romania. In all the studies about 30% from the sample do not have access to internet. Although, 24% from the men and 17% from the women have daily access to this communication way.

For youth people (15-25), 44% from men and 29% for women do navigate on internet daily. Also, 6% from men and 18% from women don't ever navigate.

For the adult people (26-45): 28% from men and 16% from women do navigate on internet daily. 30% from men and 35% from women never navigate.

For older people (46-55): just 3% from men and 8% from women navigate daily and 60% from men and 75% from women never.

For medium and superior level of the income and education 82% are using internet and 30% accessed the site on sexual theme in the last month.

The number of visitors of our site started in January from 381 was 1902 in August.

The most interesting subjects for the visitors were syphilis, candida, E.D., precocious ejaculation and feminine sexual dysfunction.

### **Conclusions:**

A percentage of 12.5% from the visitors add to "favorites" our site. For us, it means a good start and a strong desire to continue.
